9 May 1960

Dear Doc,

Enclosed herewith are three sets of a four page description of the data to be recorded, the sequence in which it is recorded, and the expected accuracy of this data. It is possible that we will change the method by [REDACTED] and therefore the exact shape of the format may change in detail a little bit. This change would also change the curvature of the line of timing dots a little bit. If we make this change, however, the format will still remain entirely on the film and the dot pattern will still be exactly knowable.

STATINTL

After you have had a chance to discuss this with the consumers, perhaps we should all get together to consider any changes which might be desirable.

Also enclosed herewith are some changes to the specifications book.

Best regards.

Milt
